Applicants' Preliminary Amendment is acknowledged. Claim 9 is canceled.

Claims 1-8 are presented and represent all of the claims under consideration.

An Information Disclosure Statement filed April 18, 2006 is further acknowledged and has been reviewed to the extent each reference has been provided.

The disclosure is objected to for the following informalities: In claim 1 within the definitions of the R<sup>1</sup>, R<sup>3</sup> and R<sup>4</sup> groups, proper Markush language recites "selected from the group consisting of."

Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Doi et al., US 2004/0058914.

Doi teaches the administration of the neurokinin receptor antagonist DNK 333, which is N-[(1R,2E)-1-[(3,4-dichlorophenyl)methyl]-4-[[[(3R)-hexahydro-2-oxo-1H-azepin-3-yl]amino]-4-oxo-2-buten-1-yl]-N-methyl-3,5-bis(trifluoromethyl)-benzamide, the compound of instant claim 7, in the treatment of urinary incontinence. See claims 1, 5 and 6, pages 29-30. The claims differ in that Doi requires combination therapy with an anti-cholinergic agent represented by formula I.

The present claims, however, are open to the inclusion of any number of additional therapeutic drugs in the claimed method of treating urinary incontinence. Further, the type of urinary incontinence, i.e., urge incontinence, stress incontinence, mixed urge/stress or neurogenic incontinence, would have reasonably been encompassed in Doi's teaching because in most cases of urinary incontinence, the common pathology is due to detrusor muscle incompetence.

No claim is allowed.
